This monograph is intended to contribute to the study of the orientalizing phase in archaic Greece, through a systematic examination of the evidence provided by copper alloy and iron helmets. A postcrash investigation of 329 Motorcycle and Bicycle crashes involving head injury using police, hospital and Post Mortem data and damage assessment of the protective helmets worn in the

crash. Experimental research into skull bone strength, transmission of impact force from the lower jaw to the intracranial space, properties of protective helmet lining materials and headforms for helmet testing. Laboratory simulation of sliding and rotational accelerations of the head indicate a need to revise the Australian Standards for protective helmets to provide improved protection to facial and temporal areas, to soften protective helmet liners and improve sliding properties of helmets. The optimal requirements for childrens bicycle helmets need to be

In 1950s Los Angeles, entrepreneur Mike Dimitro convinced a group of young American athletes to fly around the world playing rugby league, a game that was entirely new to them. Miraculously, the American All Stars competed with the best Australia, New Zealand, and France had to offer, and shocked the locals with some stunning victories. This story tells not only of the media circus and celebrity adventures, but also the All Stars'

fight and flings, tragic illnesses, and farcical court cases. Dimitro's mission to establish a rugby league in the United States failed in spectacular fashion--though one All Star went on to win the Super Bowl, one became a Hollywood stuntman, and another an Olympic champion. The German Stahlhelm is perhaps the most recognizable image of World War II. Manufactured in its millions, it was used or copied by many countries. It is still one of the most collected relics of the war; but despite its relative availability, prices have reached levels that challenge collectors to protect themselves by

acquiring in-depth knowledge. This book, by a collector of 30 years' standing, offers a detailed masterclass in the patterns, component parts and finishes of the combat helmets used by the German Army, Navy and Air Force. It is illustrated with a superb selection of rare period photos, colour photos of collected examples, and striking colour paintings. A comprehensive and wonderfully illustrated study of Roman helmets, their changing styles, their construction and their use in combat Bicycle helmets are an essential part of riding. The collecting of MKII helmets from the second world war has seen a considerable increase in interest among collectors recently. The

enthusiast approaching this sector of militaria collecting for the first time has very few tools available that can at least point him in the right direction. So, taking stock of the knowledge I have acquired and with the help of various collector friends, I thought it might be useful to publish this guide on MKII helmets in the second world war and their use during the Italian Campaign. There is certainly a lot more to discover but this is a starting point. A tip, before making a purchase, always ask the opinion of other collectors because a trained eye can definitely help you in this jungle of post war use, fakes,

tampering... and beautiful helmets that still know how to tell their story. A big thank you goes to Francesco Braneschi, it is also thanks to him that this "research" came about, to his passion and to our constant exchanges of opinion on this sector of the militaria. In an attempt to understand something more I cannot fail to thank Marco Visani, super adviser with his infinite bibles. A thankyou also to those who contributed with their time, photographs, information, and much more: Alessandro Zentile, Antonio Bonanno, Aaron Delaney, Brendon Ellis, Cristian Rubiola,

Provided by publisher. This book, by noted SS and helmet scholars Mike Beaver and Kelly Hicks, presents the combat and parade helmets worn by the SS from its earliest days to the end of wartime production. The examples shown are genuine artifacts of the Third Reich, and most are shown here for the first time. Some of the finest collections and sources globally have been solicited in the construction of this book. The value of these SS helmet resources from the world over cannot be overstated in terms of their contribution toward collector knowledge - as well as the

safety and survivability of this historical hobby. The photographic selection, and excellent quality of photo-representation, brings to life the heraldry and visual impact of these iconic objects. The reader will not only understand and become well versed in the recognized variations of SS helmets, but will also have a feel for the historical context in which they were used. Updated English version of the author's thesis (Ph. D.)--Lorâand Eèotvèos University, Budapest, 1992. Published shortly World War I, this book presents the virtues and failings of helmets and body

armor in warfare of the time. To this end, it brings together materials collected from all accessible sources; it shows the kinds of armor which each nation used in World War I, their strengths, and weaknesses. This publication approaches then-contemporary armor in a historical context, weighing aesthetic and practical concerns and comparing armor to well-known pieces in the Met's collection. Measurements of the noise attenuation provided by five flight helmets were obtained on a manikin head and compared with attenuation measurements

obtained on human subjects according to the USASI Standard for Evaluating Real-Ear Attenuation at Threshold. The two sets of measurements were similar. The manikin method has certain advantages which should be considered in terms of the particular requirements of an evaluation program: (1) a helmet can be optimally fitted with little expenditure of time; (2) variability introduced by human factors is kept at a minimum; (3) high levels of noise can be used as the test stimulus; (4) visual and auditory monitoring of the attenuated noise provides the experimenter with a precise appraisal of

the fit as adjustments are made; (5) manikin measurements are particularly useful in revealing improvements in attenuation resulting from minor modifications. (Author). This two volume set is a fully illustrated, detailed look at the famous German "stahlhelm" of World War II. Full color photographs - including multiple-view, interiors, and up-close detail - show Army, Luftwaffe, Kriegsmarine, Waffen-SS, Paratroop, and many others. Both volumes have been specifically produced to give the advanced collector the opportunity to

expand his or her knowledge, and to compare paint and insignia against their own collections. For the novice or would-be collector, these books are an invaluable reference. This wonderful new survey follows the evolution of the sports helmet from early military and aviation uses, through early motorcycle and auto racing, and to modern helmets used in a wide variety of sports today. The science of helmet design and manufacture is covered before moving into the art of the helmet. Helmets for six major sports are extensively covered: auto and motorcycle racing,

bicycling, equestrian activities, skiing, football, and ice hockey. Some lesser known sports and their helmets are also included to give a fascinating and complete panorama of the field. The design innovations, both for safety and appearance, the colors, and the fascinating history will engage the reader, while nearly 600 color images will please even the most particular sports fan. For designers, players, scientists, and historians this book is a true delight. Learn how woodpeckers have inspired scientists to create new and improved helmet technology. Now that people are

starting to see that karting is the perfect training ground for professional racers of all stripes—as well as a not-so-expensive alternative to full-scale road racing and oval track racing—it's become the fastest-growing motorsport in the U.S. and the world. This photographic catalogue of the helmets worn by WWII American parachutists during D-Day and beyond is based on the multiple exhibits at the D-Day Paratroopers Historical Centre (Centre Historique des Parachutistes du Jour-J) at Carentan, Normandy. It details and explains the different helmet markings in a series of large format colour photographs of the exhibits, accompanied by previously unpublished photographs from veterans' private collections showing paratroopers in action and at rest during the liberation of Europe

in 1944 and 1945. Indonesia, the governing department should have standard rules into the production of the combat helmet for the army and how manufacturing processes should consider on the material and the design shape in the future, such as lowering weight and adding mobility to the user. Ultimately, the suggestions made in this report can plausibly change on how the governing standards of Indonesian combat helmets for the army can move into the next level and finally can demonstrate a higher level of quality in many parts of the helmet design that has

been examined and analysed with the support of academic research and testing protocols. Currently, the department needs to focus on the potential fragmentation in the future such as threats, especially brain injury from bullet effects or other ballistic threats. As a result, it is arguable that the army and the head office of production for combat helmets should concern on the operational testing and evaluation before making the decision to produce the proposed design of the helmet. This can, therefore, improve the design of the combat helmet for the army

in Indonesia. This book presents several years of research into the history of America's post-World War II M-1 Helmet. It provides the most comprehensive look into the research, development, and production of the M-1 Helmet during this often overlooked period. All aspects of the M-1 Helmet are covered, as well as associated research and development programs that impacted the helmet, such as the Nylon Helmet Program. The book provides a detailed look at helmet production, including the helmet body, cotton duck liner, Combat Helmet Liner, parachutist's helmets, and

camouflage helmet covers. The production history of every major manufacture is also provided. Every production helmet is covered with full color photographs, including detail shots and production markings. Also included are contract sheets, a contract number reference, military specification drawings, and photos of helmet samples and helmet production.
